Explicit execution planning and supported paths

Generic forward | exact-shape offline policy | caller passes config to PreparedSequence

(a) ExecutionPolicy.select: explicit offline lookup

No request-time benchmark; no universal small-batch threshold.

IMPL
B, T, H, D
cell / dtype

IMPL
Nonempty table identity
must match caller

IMPL
Exact-shape key
table entry exists?

mismatch

absent key

found

IMPL
Identity mismatch
explicit error

IMPL
MMA default: 16 / 4 / B
unknown key fallback

IMPL
Offline table config
MMA or SIMT

Explicit caller composition; PreparedSequence does not invoke ExecutionPolicy.

IMPL
Caller passes config

(b) PreparedSequence: validate, launch, preserve the selected contract

IMPL
Wx / R / b / initial
config + output mode

IMPL
Semantic + layout checks
CUDA; 16 <= D <= 128

pass

IMPL
MMA or SIMT kernel
serial chunk execution

fail

TBD
Resource-budget gate
not implemented (TBD)

IMPL
Invalid / unsupported
explicit error

IMPL
Y + FP32 carry
full / hidden / last

PROPOSED: capability / resource-aware policy
Preserve contract; qualify fallback or reject

PROPOSED later: cluster / WGMMA / FP8
Sharding, operand layout, protocol: TBD

State / feedback Compute Input / output Sync / constraints Storage / scope

IMPL: Implemented **DOC: Documented** **PROPOSED** **TBD: Unknown**
